  - customer needs
- Low latency in corporate live broadcast ◀

## An Introduction to Live Streaming Service

Roka one-way live streaming service has the capability to provide the big number of users with the live streaming of lectures by one or more people. This capability is suitable for assemblies, conferences, seminars, and highly participated training courses. The service can be compared to live Instagram; however, with the difference of added some valuable capabilities appropriate to the needs of institutions and organizations of our country

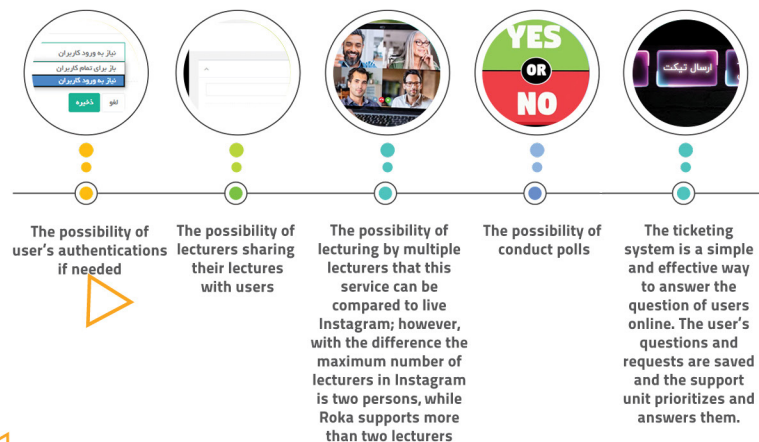

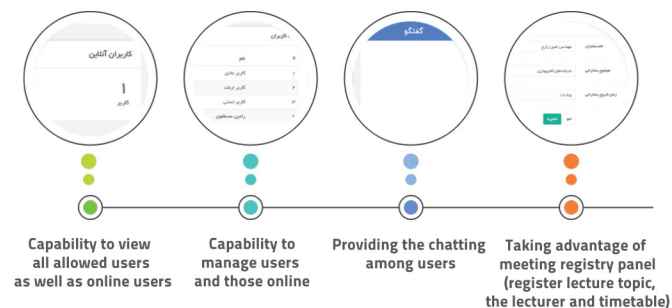

## Roka Live Streaming System Capabilities

The Roka Live Streaming System provides the users with the possibility of recording and Saving the meetings on organizational servers, if requested by the person in charge of the meeting

## Roka Live Streaming System Capabilities

Roka service with corporate broadcast and training capability is ready to provide services to organizations, offices, schools and institutions. Some capabilities of this service include

## Two-way Live Streaming Service

## Live Change of Background Images

Roka Live Streaming System makes this possible for lecturers or instructors to be able to use live background in their presentations, which is quite relevant to the subject matter and the background will also change as soon as the subject changes. Such a capability is used in meetings where the speaker should provide the attendants with statistics and high volumes of information, in corporate assemblies or to introduce products and advertisements, with a large number of viewers

## Online Assemblies System

### Two-way Live Streaming Service

Roka System, in addition to providing one-way live streaming service (as explained in the previous section), has provided its users with a two-way (or more) live streaming service. So that, those predetermined users in different geographical locations or the users selected by the chairperson of the assembly, the class teacher, or the event manager can be in live contact with other users interactively (two-way live streaming), and the videos of all these people will be sent to many people alive. This feature is widely used in the meetings of stock exchange companies, where stock exchange observers sometimes wish to connect to the system. Other occasions that make the most of this feature include online classes, corporate end-of-year celebrations for best employee selection, competitive ceremonies and events for the announcement of winners and more

## Quality of Holding and Assembly Facilities

Rayan Nik Tajhiz CO. has provided its users with a variety of packages and services for the best possible organization of meetings, including the voting and polling system, sending private questions by the shareholders and answering by the operator, the presence of technical support for the management of the shareholders, and possibility of holding a test maneuver before the assembly and .... In addition, Roka service with features such as professional cameras and port splitter and 10 ,microphones, LED lighting so has been able to enjoy its clients' satisfaction

## Holding Assemblies Capacity

Roca Live Streaming Service, with Gig with 10 links of 3 accounting suitable bandwidth per corporate assembly has prevented the limitations that exist for the presence of shareholders in the meetings. It is also possible for the online assembly to be sent simultaneously to social networks upon the client requests

## Two-factor Authentication

The Roka system provides its users with a simple shareholders' authentication, that is called two-factor authentication. So that, shareholder, user or attendant will receive a text message containing a number, having entered the mobile phone number, and they should enter the same number completely and accurately in the displayed box. Activating this item is like asking the shareholders for identification twice before entering the forum. Once with the stock exchange code and national code / identity card number and again with two-factor authentication

## Shareholder Authentication

In meetings held in the past years (before the in person and in seminar (19-outbreak of covid halls, only the shareholders of the relevant company are allowed to enter the assembly. In the current situation (holding meetings online) the non- shareholder's will be prevented from attending the meetings. Thus, only the shareholders whose identity authenticated by receiving the national ID (or identity card number) and the stock exchange code are allowed to attend the assembly
